EP uniTool NEWS

ISSUE 01 | JULY 2021

EP uniTool

We have just started…!

First very important step has been taken internal release of our strategic calculation and communication tool took place June 17th. To ensure the our tool is growing as well keep an eye on the performance more initiatives and software have been implemented. See further explanation below.

Thoughts and insights

Such a large project with so many stakeholders and hours needs ongoing evaluation and realization of learnings and insights that for sure could benefit in other projects. Hereby a few of our insights:

Agile project: The realization that new ideas are emerging along the way defines an agile project. The project process is optimized, so the right 'products are produced' faster as user stories have clarified the right requirements.

External IT supplier: Having engaged IT specialists with newest technology knowledge and ideas is boosting this project/ product to a level we never could have achieved ourselves.

Importance of communication:
A strategic choice from the start has been to communicate open minded on EP uniTool during the entire process to keep awareness and interest from stakeholder as well as 'investors'.

Latest news since launch
- Better overview of the input fields.
- Approx. 100 new formulas.
- Recommendations/validations added on all relevant input fields.
- Possibility of calculating belt conveyor with omega/center drive.
- Calculation of load percentage based on the maximum working temperature.
- Calculation of PV limit in turns on side flexing belt conveyors, based on speed and maximum working temperature.
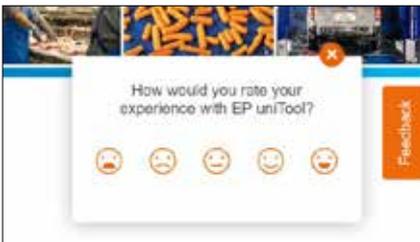

Internal release of EP uniTool:

This is very good news. Very satisfied that we have this available to speed up our respond to Customers in a reliable way based on building up this tool with years of experience. As mentioned, this tool should keep on growing with capabilities and content!

Jordi Crusafon
President North,
West & Central Europe

"

Have a nice **SUMMER**

Feedback are welcome
Tool for analyzing user behavior and feedback is now integrated in our solution.

EP uniTool symbiosis
The close co-operation with IT Minds goes on – now even closer! Finally possible to have our 'colleagues` in the office when needed. A great opportunity to work smarter.

Error tracking system installed
The overall raw performance of EP uniTool is monitored and optimizes the fixing of crashes and bugs.
