

Feature Freeze & UX

EP uniTool is now live for all; internal & external. Still the tool is progressing with more content and formulas in the calculation app.

What is going on?

Feature freeze is a standard part of a development process.

All work on adding new features has been on hold for a period, shifting effort towards improvements in general plus a specific focus on UX – user experience.

IT Minds, our IT partner, says:

"As part of the feature freeze a software infra structure upgrade has been undergoing. This time we have re-implemented the eptool.online to make it more extensible and better at recovering from errors. Furthermore this change will allow us for a live communication and updates on the EP Portal."

The importance of UX

User experience tries to fulfill the user's needs. It aims to provide positive experiences that keep a user loyal to the product or brand. An UX designer has worked with us; checking all functionalities with the eyes of a user.

What is next?

The calculation part will have a more focused design; meaning it should be easier to overview the possibilities when calculating. Improvements that implement the newest elements and trends in computer design.

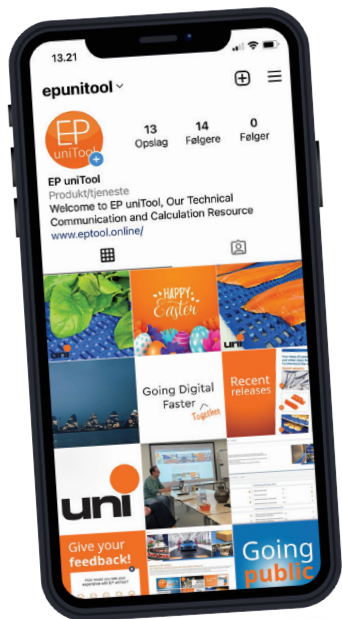

In the pipeline is also a material section with eg chemical overview.

EP uniTool has been external available for some months now and we can already say, that it helps a lot in our relationship with our customers: Every time we show it – especially with OEM's – everyone is positive that the tool helps in building up the knowledge about modular belts and chains.

We would like to highlight:

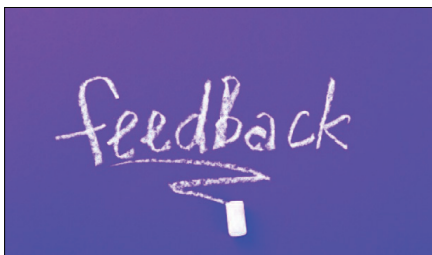

- The new calculation program is really user-friendly and we appreciate the fact we can save a pdf of our calculations in My Projects. In this way we can share our calculation results have the needed dialogue with OEM about projects.
- The datasheet part is smart and easy to use and our customers or colleagues can easily find the information they need about our belts and chains – and furthermore build their own catalogue.

New portal look

As part of the coming UX improvements – the portal also has a new look.

Have you already tried it?

Find the datasheets (menu bar) and download what you need as separate datasheets or build a customized catalog.
